

## Increase the capacity of existing cable ducts with fiberglass profiles

Reduce costs of network transformation

A-Profile **PR 5080**

for ground ducts type 22, 23, 24

Available in lengths starting from 1.5 meters

This profile, manufactured in fiberglass is designed to increase the cable capacity of existing concrete ground ducts. With its high mechanical and corrosion performances, it allows to increase significantly the capacity of the installation at minimum costs.  
Advantages of fiberglass in this application :

- Excellent corrosion and UV resistance
- Selfextinguishable and very good fire resistance
- 0% halogens
- Electrical insulator : extremely safe
- Easy to install, to cut and to drill without sharp Edges
